

What is the Southwest Fire Science Consortium?

The consortium is a way for managers, scientists, policy makers and the public to interact and share science. Our goal is to see the best science used to make management decisions and scientists working on the questions managers need answered. The Southwest is one of the most fire-dominated regions of the US, and the Consortium is the only regional organization focused on fire research and information dissemination across agency, administrative, and state boundaries. We bring together localized efforts to develop scientific information and to disseminate that to practitioners on the ground through an inclusive and open process. Please join us by attending a field trip or workshop, reading and sharing the materials on our website, and/or contributing to the fire conversation by proposing a topic for an event or product.

Submit an event proposal and let us put your ideas to work!

What can we do for you?

Proposals: We can put your idea to work by providing staff and funding to host a field trip, workshop, webinar, or other event. Propose an idea and we'll review it. Visit our website or contact us directly for proposal forms and/or tips!

Travel Funding: We provide travel grants to attend our events, to supplement tight travel budgets.

Working Papers: Is there a fire-related topic for which you lack sufficient current information? We produce syntheses of fire science to help address current management questions.

Wildland Fire Lessons Learned Stories: We typically fund two short videos per year. Is there something you feel should be covered?

Updates and Events Listings: Sign up for our mailing list or follow us on Twitter and stay up to date on training opportunities, recent publications, current events inside and outside the Consortium, receive a quarterly newsletter... Send your fire related event listing and we'll get the word out!

COMING EVENTS

Webinars

“The East Jemez Landscape Futures Project” 11am AZ/12pm MDT August 31, 2017.

Conferences

7th International Fire Congress, “FireVision 20/20: A 20-year reflection and look into the future,” Association for Fire Ecology. November 28-December 2, 2017. Orlando, Florida.
