

What is the Southwest Fire Science Consortium?

The consortium is a way for managers, scientists, and policy makers to more effectively interact and share science. The Southwest is one of the most fire-dominated regions of the US, but limited in terms of organizations focused on fire research and information dissemination. In the Southwest there are many localized efforts to develop scientific information and to disseminate that to practitioners on the ground, but these initiatives are often not well coordinated or aware of all the information and resources that are available. The real need for a consortium is to help bring these parallel efforts together to be more efficient and inclusive.

Submit an event proposal and let us put your ideas to work!

What can we do for you?

Proposals: We can put your idea to work by providing staff and funding to host your field trip, workshop, webinar, or other event. Propose an idea and we'll review it. Visit our website or contact us directly for proposal forms and/or tips!

Travel Funding: We can provide travel grants to attend our events.

Working Papers: Is there a fire-related topic for which you lack sufficient current information? We typically produce two short working papers per year on various topics and would like your input!

Wildland Fire Lessons Learned Stories: We typically fund two short videos per year. Is there something you feel should be covered that hasn't been?

Updates and Events Listings: Sign up for our mailing list or follow us on Twitter and stay up to date on training opportunities, recent publications, current events inside and outside the Consortium, receive a quarterly newsletter... Send your fire related event listing and we'll get the word out!

UPCOMING EVENTS

Webinars

Impacts of fire hazard assessment/fuel reduction priorities on mega-fire outcomes: hypothetical test of the Wallow Fire, 4/25 12pm MDT.

Structure of fire size distributions: a broad view of interacting gradients in wilderness management, spatial climate, & topography in three western regions, 5/15 12pm MDT.

Field Trip

Wallow Fire September 2013... more information coming soon!
